BINARY COMPUTER
WHITEPAPER

DISCLAIMER

Navigate

Introduction and Mission

Computer binary is a way of representing data and instructions in a computer system. It is composed of two symbols, 0 and 1, which are used to represent different values.
Binary is used in digital circuits, as well as in computer programming and software development. Binary code is used to represent text, numbers, images and other types of data.

As we know today within the crypto space security is a major risk in order to protect your assets. It is becoming easier by the day for users to get their crypto stolen simply by clicking on a link and your funds are instantly wiped from your wallet or hackers getting a hold of your email accounts and getting access to your crypto exchange accounts.

As our investors' funds are our priority, we have decided that launching a decentralized exchange would be extremely beneficial not just for us but our clients over all as they cannot be hacked by a single party and we will be integrating unique features to further benefit all our investors

Features

For every active user transaction a 3% $BINARYreward is granted to holders, decentralized wallets only, fostering a healthy distributed network and community usage. The more $BINARY is actively used, the more rewards are granted!

Marketing Plan
Without any doubt, we have devised an extensive marketing strategy that is set to create a massive impact

LIQUIDITY LOCKED
Nobody has access to the liquidity tokens including the developers.

RENOUNCED OWNERSHIP
We have decided to Renounce Ownership of SMC and team didnt hold tokens in the end

State Of Token

03
